SKILLS

TypeScript, JavaScript, ReactJS, NextJS, Node.js, SQL, PostgreSQL, Redis, Cloudflare Workers, Git

PROJECTS

Parakh | *Cloudflare Workers, Upstash Redis, Neon Postgres, Cloudflare Queues* July 2026 – August 2026

- Built an AI-powered orchestration system that routes incoming GitHub pull requests through an external review API and returns prioritized, actionable feedback to developers.
- Kept the system reliable in production by building a job-recovery pipeline that catches stuck or stalled requests and automatically retries them, so results stay consistent even when the upstream API is slow or fails, mirroring the kind of resilience needed when orchestrating many third-party vendor responses.
- Reduced noisy, duplicate, or low-value output by building a scoring and deduplication layer that ranks results by real severity before they reach the end user. <https://github.com/PranshuRaj1/Parakh>

IRA | *Cloudflare Workers, Neon Postgres + pgvector, Upstash Redis, Telegram Bot API* May 2026

- Built a memory-augmented AI agent, accessible via Telegram, using a three-layer pipeline to store, retrieve, and update structured user data in Postgres over time instead of relying on a fixed context window.
- Hardened the system against malicious or malformed input with an 8-layer validation and guardrail pipeline plus circuit breakers, built after running my own adversarial test suite across 7 attack categories, so failures are caught and contained instead of cascading.
- Rolled out changes through a staging environment before production to catch regressions early, treating reliability as a first-class part of the build, not an afterthought. <https://github.com/PranshuRaj1/ira>

Dodge AI | *Neon Postgres, TypeScript, Next.js* March 2026 - April 2026

- Built a natural-language-to-SQL tool over a supply chain Order-to-Cash graph database, letting business users ask plain-English questions and get accurate, SQL-backed answers instead of writing queries themselves.
- Modeled a multi-entity relational schema representing customers, orders, invoices, and payments, and translated ambiguous natural-language queries into correct joins and filters across that schema.
- Built a force-directed graph visualization layer so users could explore entity relationships directly, turning a raw relational dataset into something non-technical users could navigate. <https://dodge-drab.vercel.app>

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science Engineering

July 2022 – July 2026

CGPA: 8.56/10

ACHIEVEMENTS

Led a team to secure First Place in the 2024 Firefox Expedition Programming Competition, organized by the Firefox Club of VIT.

Achieved Knight status by solving over 1000+ problems and attaining a peak rating of 1882, ranking in the top 4.91% of participants
